

## My Teaching Philosophy ☺

**The purpose of education is to**

**Achieve the outcomes, and works to break down the information easily for teacher and the students.**

### **Why do you want to teach?**

I want to teach because I feel happy when I am successful to teach others. I will teach the three subjects Math, Science and English. In my opinion, students learn best by flexible strategies, suitable for each student's condition in the class. For example: dividing the students in the class depending on their levels.

### **My goals when I am teaching**

My goals is to get the information to the students correctly and in a fun way. In addition, I try to find a new strategies to help me to solve all problem if I face any.

I believe the most effective methods for teaching are positive reinforcement, new strategies of punishment and classroom management.

I know this because I went to three schools before, so now I have the experience to choose the best methods for teaching.

The most important aspects of my teaching are timing, and organizing my ideas.
